

01 Restaurant - Astra vs Gemini UI Comparison

CivilWork-style comparison of desktop and mobile views plus source changes. The submitted Astra and Gemini index.html/style.css differ only by a UTF-8 BOM marker, so there is no supported final UI difference to exaggerate. Chromium local capture timed out; app views are therefore clearly labeled representative views based on the submitted final HTML/CSS and supplied image.

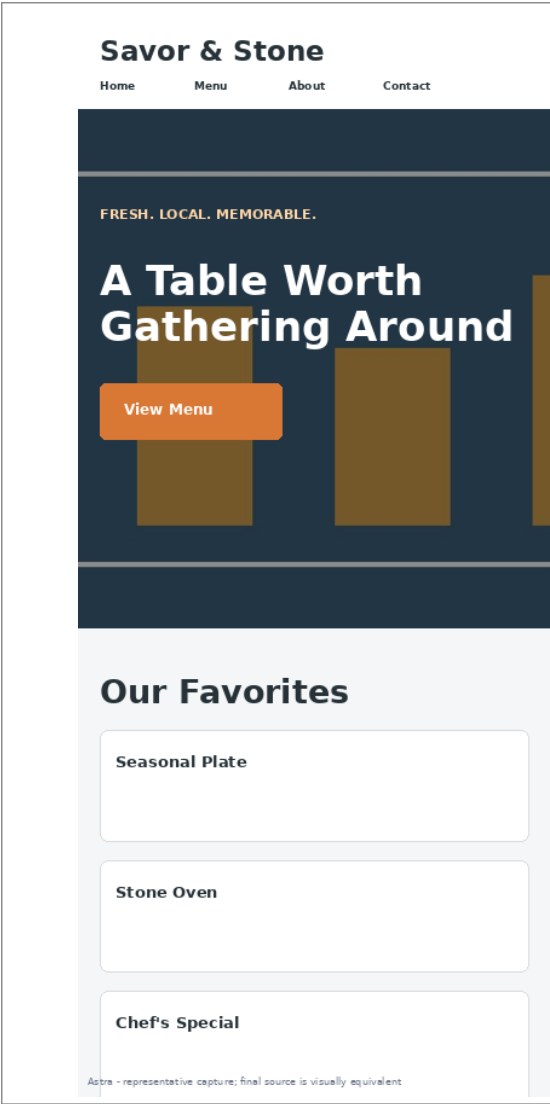

Desktop comparison

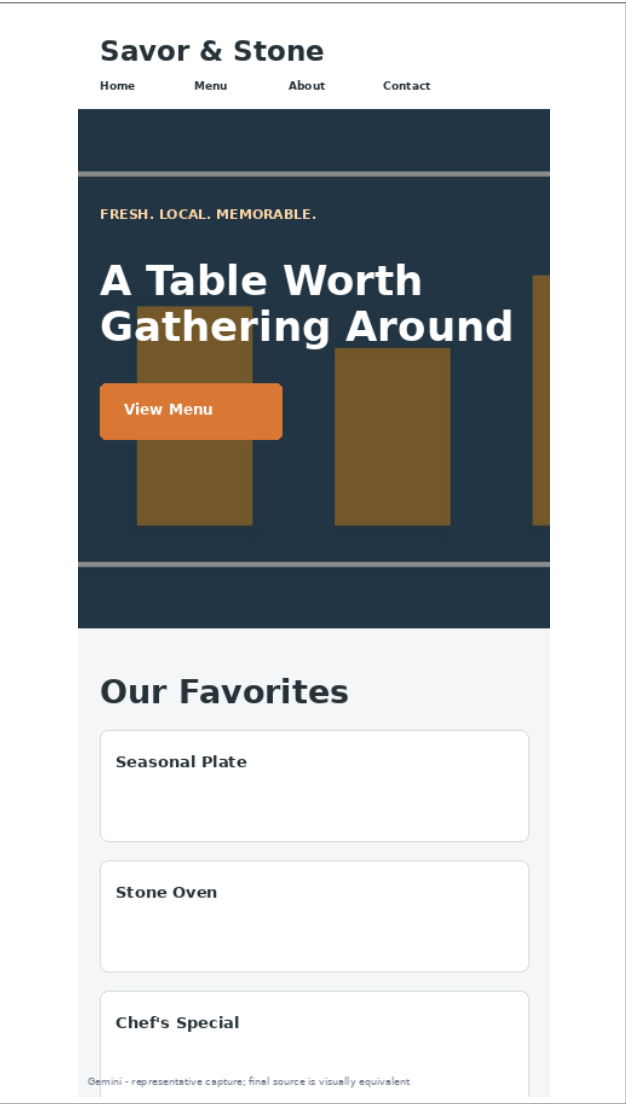

The final source is substantively identical, so no Astra/Gemini visual winner is claimed.

Mobile comparison

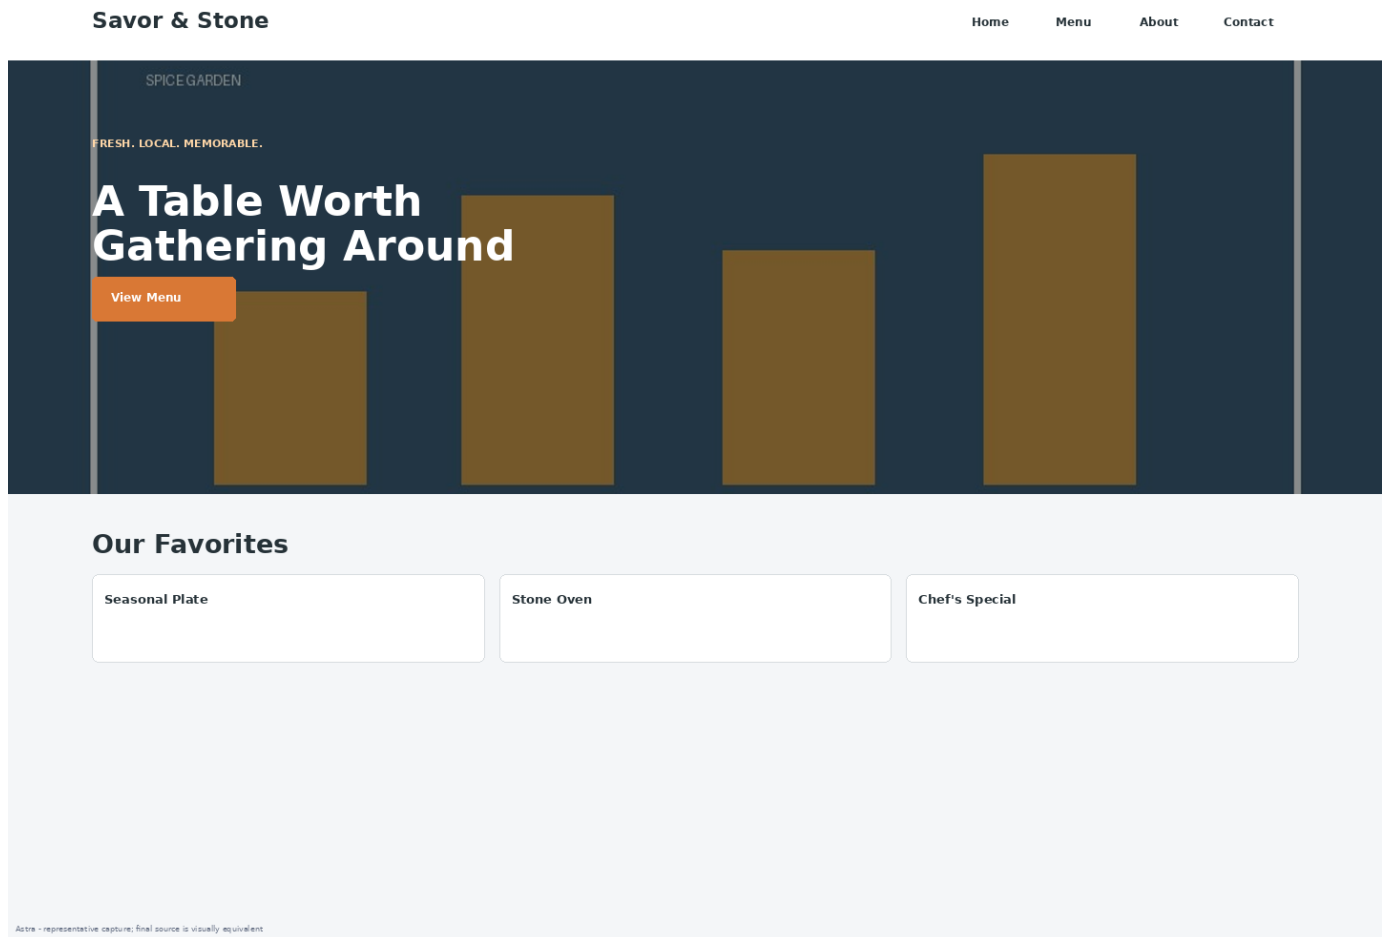

Astra mobile

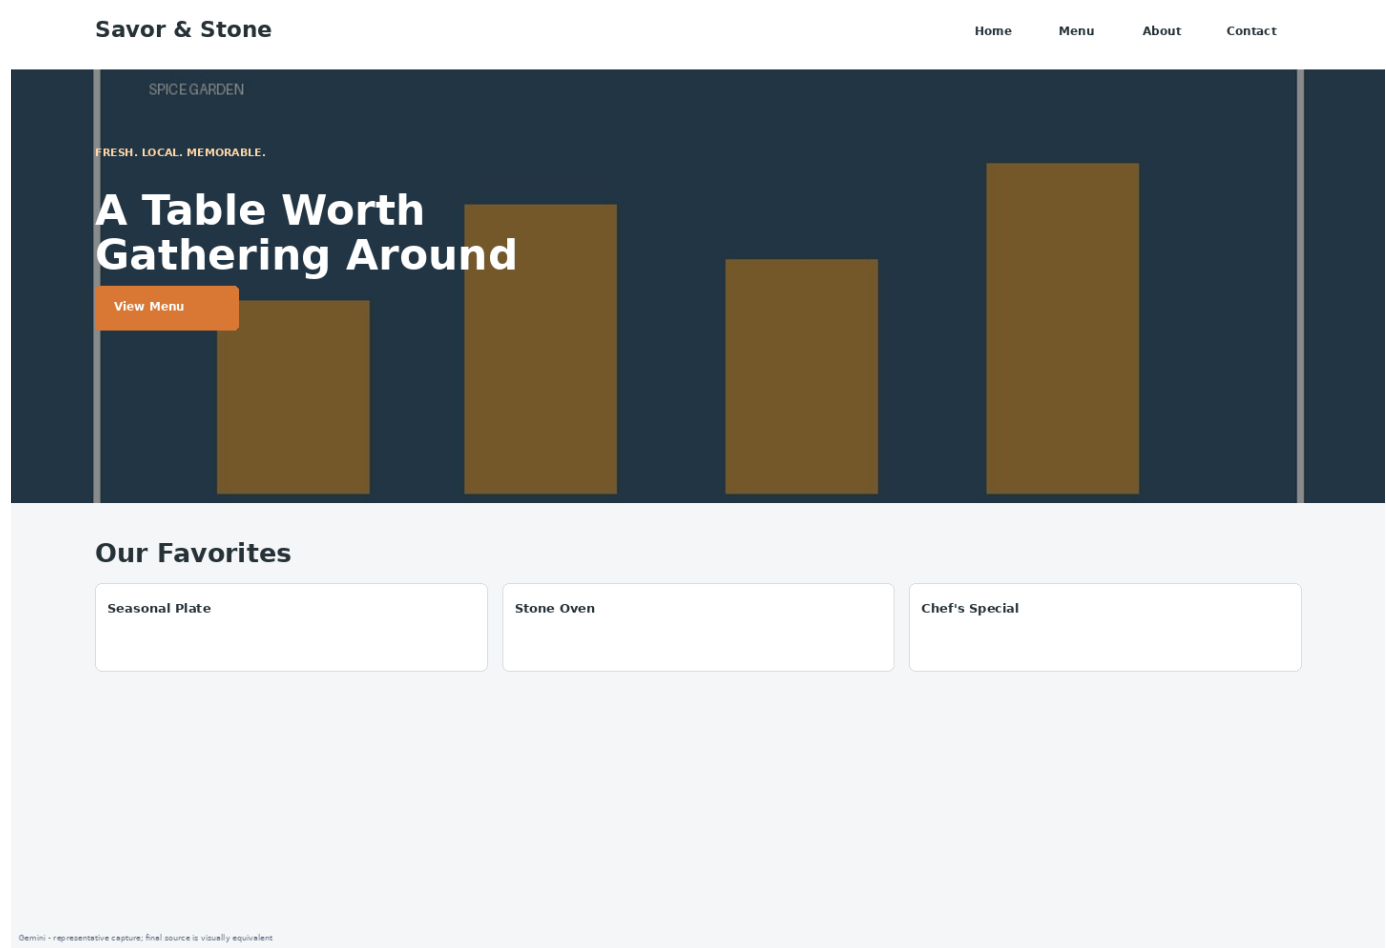

Gemini mobile

Astra desktop representative view

Gemini desktop representative view

Code comparison screenshot - index.html

01 Restaurant - index.html comparison

No substantive code differences.

Astra and Gemini content is identical after ignoring the UTF-8 BOM marker.

Code comparison screenshot - style.css

01 Restaurant - style.css comparison

No substantive code differences.

Astra and Gemini content is identical after ignoring the UTF-8 BOM marker.
