

02 Real Estate - Astra vs Gemini UI Comparison

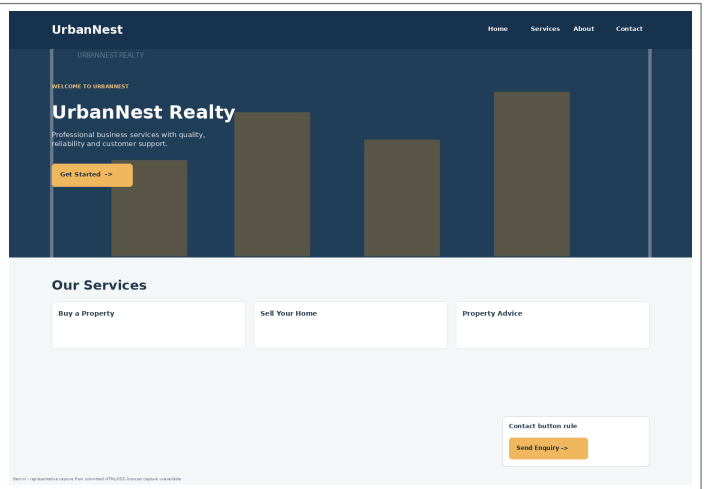

The report follows the CivilWork comparison format and focuses on differences between the submitted Astra and Gemini versions. The final HTML is effectively the same; the main CSS difference is how generic button styling is grouped with the existing .btn rule. Chromium did not complete local capture, so app images are clearly labeled representative views derived from the submitted HTML/CSS. Code screenshots are direct diffs.

Desktop comparison - submitted final UI

Astra

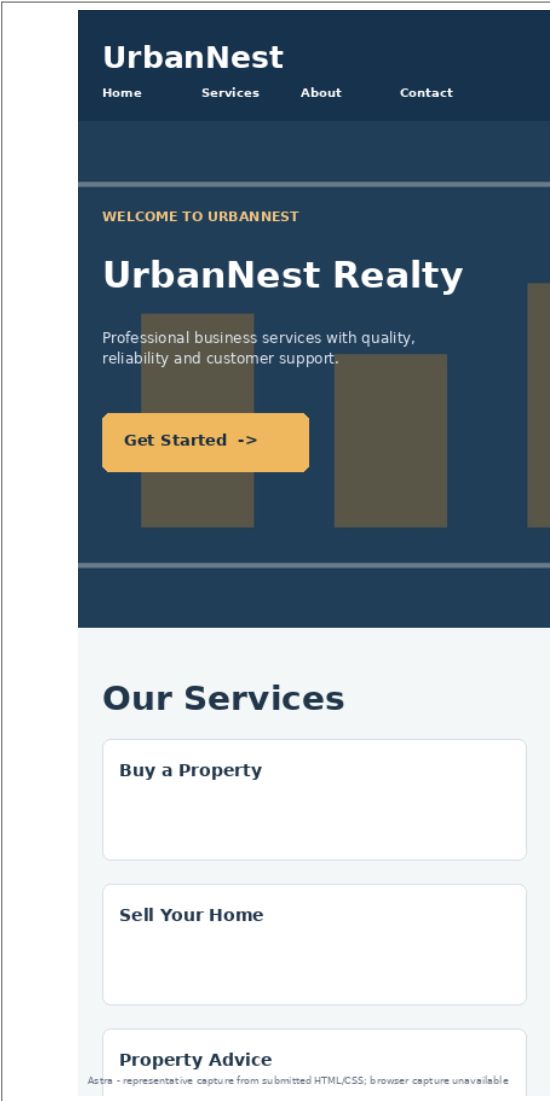

Gemini

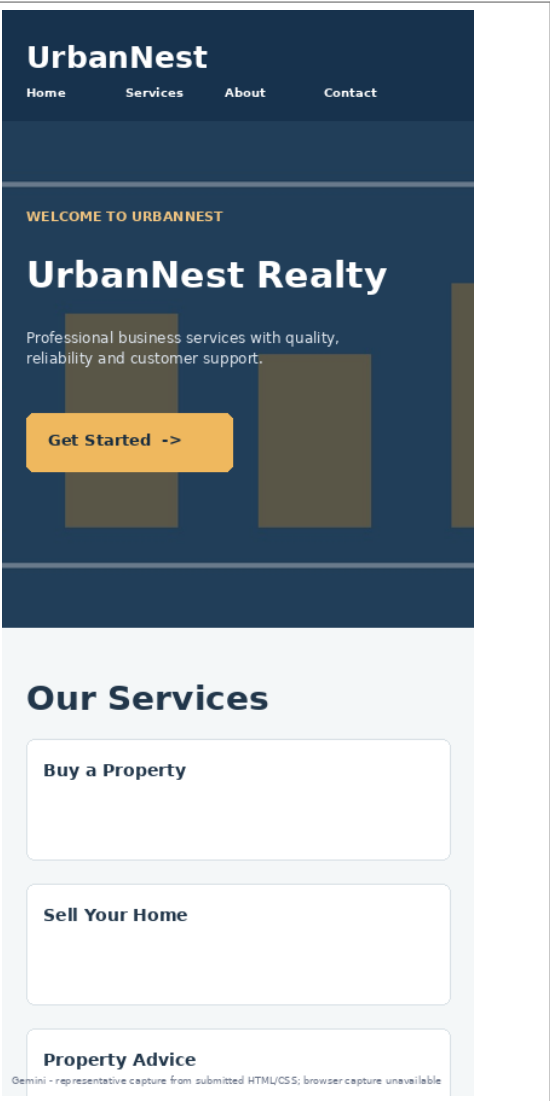

The submitted versions are visually expected to be very similar because the Contact button already has class="btn" in both HTML files. The code-diff pages document the actual implementation difference rather than implying a larger visual change.

Mobile comparison - narrow-screen view
