

MobileProfileCardFix - Astra vs Gemini UI Comparison

Desktop and mobile views are shown separately so the responsive differences are easy to compare. Code-change screenshots are included at the end.

Desktop view - Astra vs Gemini

Astra

Gemini

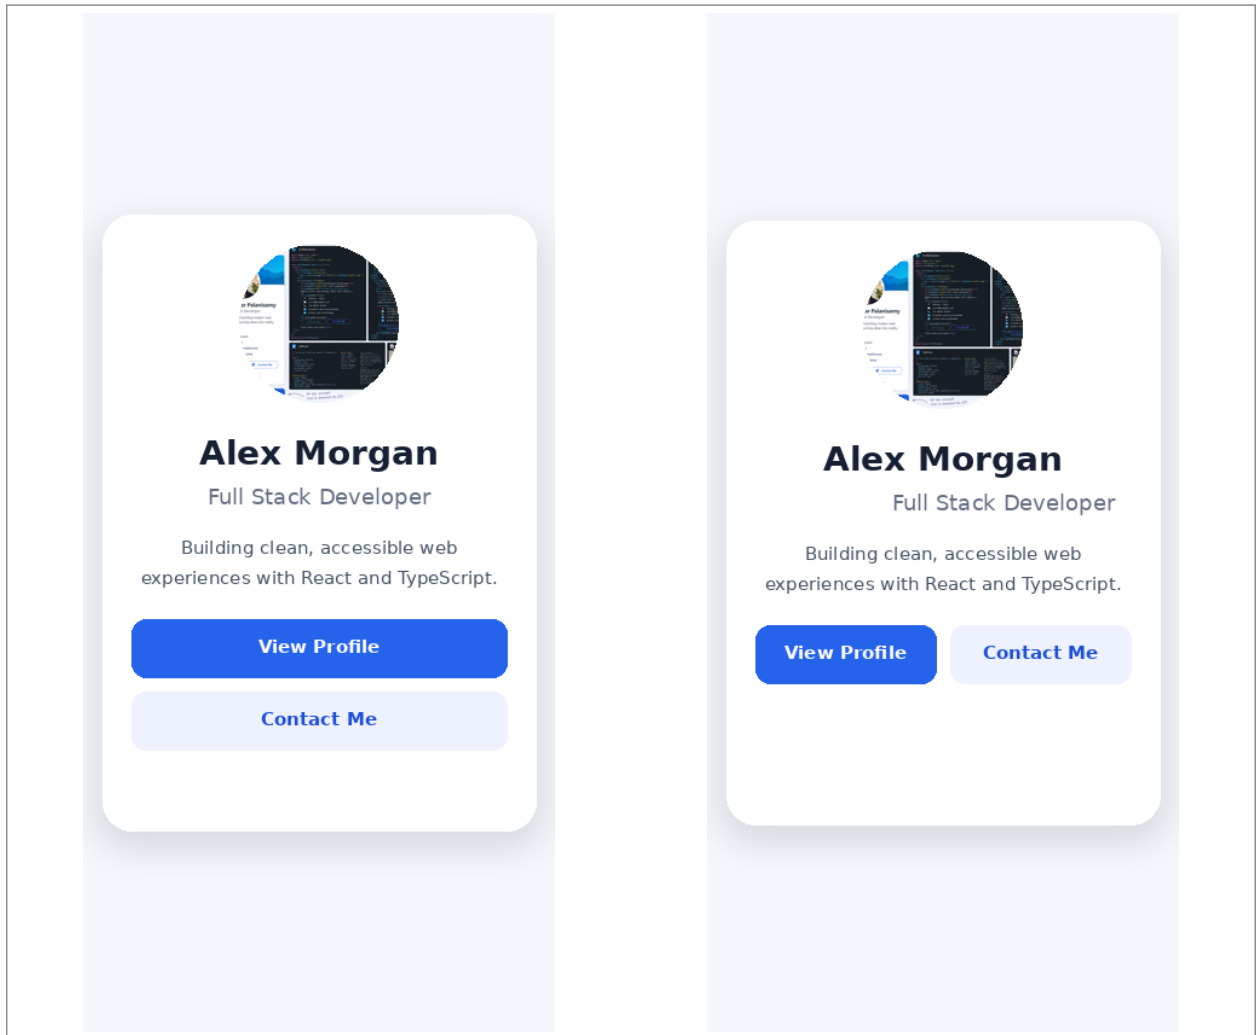

The main desktop difference is the role alignment: Astra removes the forced offset and keeps the profile text centered; Gemini retains the 100px left padding on the role.

Mobile view - Astra vs Gemini

Astra mobile

Gemini mobile

On mobile, Astra adds min-width protection, text wrapping, responsive image sizing, flex-wrap for the actions, and a 400px media rule. Gemini retains the original single-row action layout and the role offset.
