

Law Firm - Astra vs Gemini UI Comparison

Desktop and mobile views are included to highlight the responsive differences between the two implementations. Code-change screenshots are included at the end.

Desktop view - Astra vs Gemini

Astra

Gemini

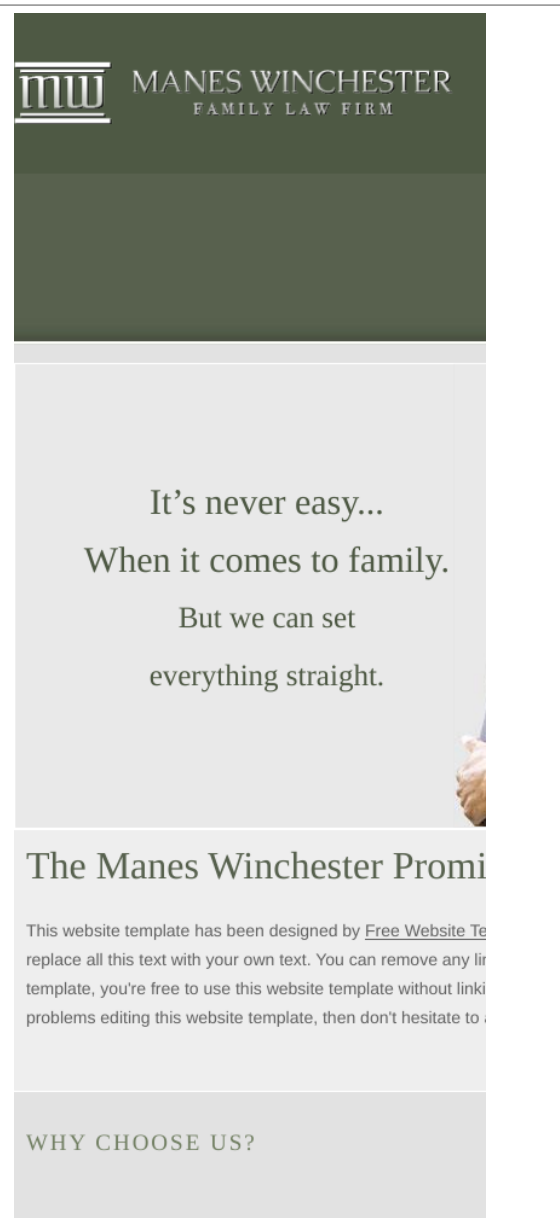

Desktop styling remains close because Astra deliberately preserves the original fixed-width proportions. The major implementation difference appears at smaller widths.

Mobile view - Astra vs Gemini

Astra mobile

Gemini mobile

Astra removes the 960px minimum width and adds responsive rules for the header/navigation, hero, featured cards, content columns, forms and footer. Gemini retains the fixed 960px minimum width, so its mobile layout remains desktop-width and is prone to horizontal overflow.

Astra desktop view

It's never easy...
When it comes to family.
But we can set
everything straight.

-   .navigation {
-       float: none;
-       display: flex;
-       flex-wrap: wrap;
-   }
```

The CSS diff captures the central responsive change: Astra sets body min-width to 0, adds keyboard-friendly submenu behavior, and introduces extensive 980px/600px responsive rules; Gemini keeps the original 960px minimum width and fixed-layout CSS.
